

StoryWorms

Listen to any book. In any language.

Make every story in the world accessible to every person on Earth

The global literary market is divided by language barriers

- **For readers and listeners:** 90% of the world's content is unavailable in their native language. Current solutions include either slow and expensive translations by publishers or low-quality robotic voiceovers that kill the magic of the story.
The result: cultural isolation and lost knowledge.
- **For authors and publishers:** The potential audience is limited to one language. Entering the international market entails enormous costs (tens of thousands of dollars for translation and dubbing of a single book) and months of waiting with no guarantee of success.
The result: lost profits and stagnation.

StoryWorms — This is the world's first platform for instant AI-powered book adaptation and distribution

We have created a unified ecosystem where technology serves art:

- **For authors:** Download your book in one language. Our platform automatically translates, voices, and publishes it in 20+ languages, opening it to a global audience **in minutes, not years.**
- **For readers:** Get unlimited access to a global library where every book is available to read and listen to in your native language, preserving the original style and intonation.

Our magic: The author uploads the EPUB. Within 15 minutes, his story comes to life in dozens of languages.

We operate at the intersection of two rapidly growing markets with a combined volume of >\$18 billion

- **E-book market:** \$13.7 billion
- **Audiobook market:** \$5.1 billion (CAGR 25%+)

Why now? The perfect storm:

- **Technological breakthrough:** For the first time in history, the quality of AI translations and speech synthesis has reached a level indistinguishable from human speech..
- **Rise in audio consumption:** Audiobooks and podcasts are the fastest growing media segment..
- **Globalization:** Users around the world demand instant access to global content.

We have a fully working MVP built on cutting-edge architecture

Key technological advantages:

1. **Own epubParser:** In-depth analysis of book structure for context-sensitive translation.
2. **Integration with Google Gemini:** We use state-of-the-art models for translation and voice-over, ensuring the highest quality..
3. **Centralized processing:** Unlike our competitors, who rely on users' weaker devices, we perform all calculations on our servers. This allows us to use the most powerful AI models and guarantee quality unmatched by others.

Our "secret sauce" is a quality-optimized architecture. We narrate the book once and at the highest level, making it accessible to everyone.

While competitors try to generate audio on the fly for each user, sacrificing quality.

We have already come a long way and we have a clear development plan

Next 12 months:

- **Q1:** Launch of closed Beta testing with the first 10 authors.
- **Q2:** Public release of the web platform and reaching 10,000 users.
- **Q3:** Launching mobile applications for iOS and Android.
- **Q4:** The introduction of AI Director Studio, a tool that allows creators to manage voiceovers, and the launch of a B2B API.

Diversified and scalable revenue streams

1. B2C Subscription (for readers):

- **Standard (\$3.99/month):** Unlimited text + 15 hours of audio.
- **Premium (\$7.89/month):** Unlimited text and audio, offline access.
- **Family (\$15.99/month):** Premium features for up to 4 accounts.

2. B2B Services (for authors):

- **Translation fee:** Token-based pay-as-you-go model (1 token = 10 characters).
- **Direct Sales Commission:** % of each book sold.

Unit Economics:

- **Cost:** Translation and voice-over of an average book (100 pages) into 7 languages costs only ~\$100 thanks to our technology.
- **Revenue Potential:** High margins due to subscription model and content scalability.

We occupy a unique niche that is inaccessible to current giants

	Traditional publishing houses	Amazon (KDP)	Storytel/Audible	StoryWorms (We)
Speed	Months / Years	Does not provide	Months (human voiceover)	minutes
Price	\$10,000+	Does not provide	\$2,000+	~\$100
Quality	High (but expensive)	Low (robo-voice on device)	Variable (depends on the speaker)	Consistently high (powerful server AI)
Coverage	1-3 languages	1 language	1 language at a time	20+ languages simultaneously

Our key advantage is that we have created a "factory" for producing high-quality, multilingual content that is 100 times cheaper and 1,000 times faster than anyone else on the market.

A project born from a passion for technology and literature, led by an experienced leader

Dmytro Dychenko — Founder and CEO

- **A visionary founder** with unique expertise who single-handedly designed and built the entire StoryWorms platform from scratch.
- Combines a deep understanding of modern AI technologies with a genuine passion for business and literature.
- The project received high praise from a former Goldman Sachs investor, who noted its enormous potential.

StoryWorms is the best proof of his ability to bring complex technology products from concept to full implementation.

We are looking for \$500,000 to accelerate growth and capture the market

Distribution of funds (12-18 months):

- **50% Marketing and Author Acquisition:** Aggressive entry into the independent author market.
- **20% Software Development:** Launch of mobile applications and "AI Director Studio".
- **20% Server infrastructure:** Scaling to accommodate growing loads.
- **10% Legal support:** Registration of intellectual property and contracts.

Goals for this period:

- **Attract 500+ active authors**
- **Reach 100,000+ registered users**
- **Reach your first \$10,000 in monthly revenue (MRR)**
